

Smooth, good looking and very sophisticated!

Looking for a portable sound system that not only performs but won't embarrass you with its poor fashion sense? Look no further than the Challenger portable sound system! With its strong and lightweight aluminium extruded chassis the Challenger is sleek and won't take the attention off you!

With a strong 75 watt power output, a choice of single or dual 16 x UHF frequency wireless receivers with LCD display and RF test function, choice of built in MP3 compatible CD player with with on board USB port and Infra-Red remote control or cassette deck, your presentation is in good hands. Retractable handle and wheels mean that you can transport the Challenger easily and the built in rechargeable batteries mean you can use the system without AC power (up to 8 hours with speech). With AC or DC operation, 2 mic inputs with phantom power available and active or passive extension speakers mean you can set up an entire system that will potentially cater for thousands of people.

The active extension speaker (CHG PSR) has its own built in rechargeable battery supply providing two major benefits –

1. You get full output power out of both speaker systems at all times as they run off their own power supply
2. You can slave a passive extension speaker (CHG SP) off either a master unit or an active extension speaker, or both!

Starting at \$1,199.00
(for basic model only)

Choose from:

- wireless handheld mic pack

- wireless lapel mic pack

- wireless headset mic pack

Challenger Specifications

- Power Output 75 watts (RMS)
- Speaker 10" three way
